confidence low

Statement under examination

IVF and reproductive technologies are open with serious ethical concerns about embryo destruction, selection, and surrogacy detached from marriage.

In plain language

This proposition bundles two different claims. The first is that modern reproductive technology such as in-vitro fertilization is permissible. The second raises serious concerns about destroying or selecting embryos and about surrogacy carried out apart from marriage. When you go to the original Hebrew and Greek, there is simply no word for in-vitro fertilization, embryo transfer, or any of these procedures, because they did not exist when the text was written. So on the bare question of whether the technology itself is acceptable, the lexicon gives no direct yes or no. What the lexicon does speak to, and speaks to densely, is the worth of the unborn at the very earliest stage. Psalm 139 says God acquired the psalmist's inward parts, wove him in secret, and saw his golem, a rare Hebrew word found only here that means the unformed embryonic mass. The same passage says God wrote all his days before one of them existed. Jeremiah 1:5 carries the same formation-in-womb language forward, Job 31:15 and Isaiah 44:2 reinforce it, and Luke 1:41 and 1:44 extend it into the Gospel where the unborn John leaps at Mary's greeting. Genesis 1:27 says humankind, male and female, was created in the image of God, and Genesis 9:6 grounds the prohibition on shedding blood in that same image-bearing. Read together, these texts give the embryo real dignity and place procreation within the created pairing of male and female. That weight bears directly on the concerns about destroying or selecting embryos and about surrogacy detached from marriage. The text also celebrates child-bearing and grieves barrenness in Sarah, Rachel, Hannah, and Elizabeth, with God answering prayers for offspring, which does not lexically forbid mediated reproductive help in principle. Narrative passages like the surrogacy arrangements of Hagar and of Bilhah and Zilpah only report such practices and their resulting strife, without issuing a clear rule for or against. So the words decisively dignify the embryo and frame procreation within marriage, but say nothing about whether the technology itself is open. Because the proposition is compound, the lexical evidence lands as disputed rather than a clean affirmation or denial.

Word dictionary

Every Hebrew and Greek word this study leans on, in everyday terms. Shaded rows are the anchor words the verdict rests on.

Strong	Word	Sounds like	Plain meaning	Times in Bible
H0517	אִמָּה	em	mother	
H0990	בֶּטֶן	beten	belly	41
H1254	בָּרָא	bara	to create	46
H1564	גֹּלֶם	golem	embryo	1
H2145	זָכָר	zakhar	male	
H3045	יָדָע	yada	to know	860
H3206	יָלַד	yeled	youth	
H3318	יָצָא	yatsa	to come out	

H3335	יצר	yatsar	to form	38
H3582	כחד	kachad	to hide	
H3629	קליה	kilyah	kidney	30
H5347	נקבה	neqevah	female	
H6108	עצמה	otsem	strength	
H6381	פלא	pala	to wonder	66
H6395	פלה	palah	be distinguished	
H6754	צלם	tselem	image	16
H7069	קנה	qanah	to buy	83
H7358	רחם	rechem	womb	24
H7551	רקם	raqam	to weave	9

Plain meanings: STEP Bible brief lexicons TBESH (Hebrew) and TBESG (Greek), CC BY 4.0. Counts are occurrences across the 66-book canon.

Verdict rationale

Variant-robust: True · Pan-canonical: True

The proposition is a compound claim and the lexicon answers its two halves asymmetrically. Its ethical-concern clause about embryo destruction, selection, and surrogacy detached from marriage connects to a pan-canonical thread on prenatal personhood. Yatsar (H3335G, 38 occurrences from Gen 2:7 to Jer 1:5) and qanah (H7069, 83 occurrences) and raqam (H7551, womb metaphor in Ps 139:15) and the hapax golem (H1564, Ps 139:16) ascribe formation, possession, weaving, and divine vision to the embryonic stage, and Gen 1:27 with tselem (H6754) plus Gen 9:6 grounds bloodshed-prohibition in image-bearing. Its permissibility clause about IVF and reproductive technology has no lexical footprint: no Hebrew or Greek term denotes in-vitro fertilization, embryo transfer, or third-party gestational surrogacy. The verdict is disputed because the words decisively bear on the sub-issues of embryo loss and detached surrogacy while the technology framing itself is lexically silent.

Scripture

Ps.139.13 · neutral · genre: wisdom

Key terms. H7069 קנה, H3629 קליה

Force. The psalmist says God acquired or formed (qanah) his kidneys, the inward parts, and covered (sakak) him in the mother's belly. The verb qanah carries a dual semantic range across the canon, bringing into possession and bringing into being, exemplified by Gen 4:1 where Eve says she has acquired a man with YHWH and Gen 14:19 where God is qoneh of heaven and earth. Both senses ascribe divine authorship at the embryonic stage. The grammar speaks to the unborn person, not to any means of conception.

Ps.139.14 · neutral · genre: wisdom

Key terms. H6381 פלא; H3045 ידע

Force. The formed person is fearfully and wonderfully made, niphal of pala, the works of God known (yada) to the psalmist's own soul. The niphal marks the formative act as a deed set apart, reinforcing the worth of the developing life rather than ruling on the means of conception.

Ps.139.15 · neutral · genre: wisdom · figures: metaphor

Key terms. H7551 רקם, H6108 עֲצָמָה

Force. The frame or substance (otsem) was not hidden from God when one was made in secret and skilfully woven (raqam) in the lowest parts of the earth, a womb metaphor. Raqam appears 9 times in the canon and 8 of those are Exodus descriptions of skilled embroidery for the Tabernacle curtains and priestly garments, so the single metaphorical womb use in Ps 139:15 treats prenatal formation as deliberate divine craftsmanship of the same artisan quality. This weighs against treating embryos as disposable but does not address assisted conception as such.

Ps.139.16 · neutral · genre: wisdom

Key terms. H1564 גָּלַם; H3335 יָצַר

Force. God's eyes saw the golem, the unformed embryonic substance, and in his book all the days were written and fashioned (yatsar) before one of them came to be. Golem is a hapax legomenon in the Hebrew Bible, attested only here, so its sense rests on the immediate context of weaving and divine seeing rather than on triangulation across other passages. Yatsar (here the H3335G byform) carries the canonical formation chain from Gen 2:7 where God forms man from the dust through Ps 33:15 forming the heart and Isa 27:11 to Jer 1:5 forming in the womb. The verse ascribes divine seeing and ordained days to the embryonic substance.

Gen.1.27 · neutral · genre: narrative

Key terms. H6754 צָלַם, H1254 בָּרָא

Force. God created (bara) humankind in his own image (tselem), male (zakar) and female (neqebah). Tselem occurs 16 times and the image-bearing thread of Gen 1:27 to Gen 5:1, Gen 9:6, and Jas 3:9 grounds intrinsic human worth and a prohibition on shedding the blood of the one made in God's image. The male-and-female pairing locates procreation within that created order. It bears on the concern over surrogacy detached from marriage but does not by itself license or prohibit any specific reproductive technology.

Jer.1.5 · for · genre: prophecy

Key terms. H3335 יָצַר, H7358 רָחַם

Force. Before I formed (yatsar) you in the womb (beten) I knew (yada) you. Jeremiah is the strongest pan-canonical cross-link to Ps 139:16, with the OpenBible vote weight at 133. The same formation-in-womb language extends in Isa 44:2, Isa 49:1, and Gal 1:15 and to Luke 1:41 and Luke 1:44 where the unborn John leaps in his mother's womb. The chain establishes prenatal personhood across law, prophets, writings, gospel, and epistle.

Gen.9.6 · for · genre: narrative

Key terms. H6754 צָלַם

Force. Whoever sheds the blood of man, by man shall his blood be shed, for in the image (tselem) of God he made man. The prohibition links bloodshed to image-bearing and supplies the sanctity-of-life ground for treating the embryo, which Ps 139 and Jer 1:5 place within the scope of divine forming and knowing, as a bearer of that protected status.

Complicating texts

Gen.30.1-13 · addressed

The Jacob narrative records surrogacy through Bilhah and Zilpah, third-party child-bearing detached from the primary marriage, recounted without explicit divine sanction or condemnation. The narrative genre reports the practice and its attendant strife but issues no normative ruling, so it neither licenses nor forbids the analogue and leaves the surrogacy sub-clause of the proposition lexically unranked between the creation-order reading and the descriptive-patriarchal reading.

Gen.16.1-4 · addressed

The Hagar account similarly shows assisted procreation through a surrogate at human initiative, depicted with attendant conflict. As narrative it describes rather than prescribes, so it cannot settle the permissibility framing of the proposition and underscores why the surrogacy-detached-from-marriage clause sits in genuine lexical tension with Gen 1:27.

Exod.21.22-25 · addressed

The law on harm to a pregnant woman uses *yatsa* (H3318, go out) and *yeled* (H3206, child), and the translation of the outcome clause is genuinely contested between premature live birth and miscarriage. The contest is itself a lexical fact: the verb *yatsa* is used elsewhere for normal birth as well as for ejection, so it underdetermines the status of the developing child in that specific legal scenario. It does not overturn the Ps 139 and Jer 1:5 embryonic-personhood chain but it does mean this particular text cannot be loaded onto the verdict either way without taking sides on a contested grammatical reading.

1Sam.1.5-20 · addressed

Hannah's barrenness and prayerful petition for a child sits inside a canonical pattern in which barrenness is grieved and child-bearing is celebrated (Sarah, Rachel, Elizabeth). The pattern lexically affirms the desire for offspring and divine response to such petition, which weighs in favor of permitting mediated reproductive help in principle. It does not, however, supply terms for any specific assisted-conception technology, so it cannot settle the IVF clause directly.

Luke.1.41-44 · addressed

The unborn John leaps in Elizabeth's womb at Mary's greeting and is described with personal action and recognition while still in utero. This NT episode extends the embryonic-personhood thread of Ps 139 and Jer 1:5 forward into the Gospel narrative, reinforcing the sanctity-of-life weight against embryo loss without addressing in-vitro conception.

Concordance traversed

H7069, H7551, H1564, H3335, H3629, H6754, H1254, H6381, H6395, H6108, H3582, H5347, H2145, H7358, H0990, H3045, H0517, H3206, H3318

Variants

Verdict variant-sensitive: False · ECM status: n/a

All anchor verses are Hebrew Bible (Ps 139, Gen 1, Gen 9, Jer 1, Exod 21), outside the ECM CBGM scope. The bundle reports `not_in_ecm_scope` true and supplies no variant units. The Masoretic reading of *golem* in Ps 139:16 is stable in the witnesses surveyed. The Exod 21:22 *yatsa* clause has a translation dispute but not a textual variant dispute in the consonantal text.

Hermeneutics

Primary method. grammatico-historical

Frameworks in play. `creation_order`, `imago_dei`, `sanctity_of_life`, `descriptive_narrative`, `lexical_silence_on_technology`

`analogia scripturae` invoked · progressive revelation factor

`sanctity_of_life`: `leans_against_embryo_loss` · Reading Ps 139:13-16 with the hapax *golem* and the formation-chain of *yatsar* (H3335G) extending through Jer 1:5, Isa 44:2, Gal 1:15, and Luke 1:41 ascribes personhood and divine authorship to the embryonic stage. Combined with the *tselem*-bloodshed link in Gen 9:6 and Jas 3:9, the lexical chain weighs heavily against any reproductive process that produces and discards embryos.

`creation_order`: `leans_against_detached_surrogacy` · Gen 1:27 male-and-female, picked up by Jesus at Matt 19:4 and Mark 10:6 and by Mal 2:15 godly offspring, frames procreation as belonging within the one-flesh marital pairing. On this reading surrogacy detached from marriage is a departure from the created order, though the narratives of Gen 16 and Gen 30 report the patriarchal analogue without explicit divine prohibition.

`descriptive_narrative`: `leaves_surrogacy_unranked` · A reader who weights the Hagar and Bilhah and Zilpah narratives as descriptive precedents notes that the canon depicts third-party child-bearing without an explicit normative ruling. On this lens the creation-order argument is weakened to a strong inference rather than an explicit prohibition, leaving room for case-by-case discernment of surrogacy arrangements rather than a blanket no.

`lexical_silence_on_technology`: `open_undetermined` · No canonical lexeme addresses in-vitro fertilization, oocyte retrieval, embryo cryopreservation, or any assisted-conception procedure. On a strict lexical reading the permissibility of the technology itself, conducted without embryo loss, is undetermined and cannot be settled from the supplied store, so a strong yes or strong no on the technology framing is not lexically licensed.

`barren_petition_pattern`: `leans_toward_permitting_mediated_help` · The canon grieves barrenness (Sarah Gen 11:30, Rachel Gen 29:31, Hannah 1 Sam 1, Elizabeth Luke 1) and celebrates divine answers to prayer for offspring (Gen 25:21, 1 Sam 1:20, Luke 1:13). The pattern affirms the desire for children as a legitimate longing that God meets and does not lexically forbid mediated reproductive help in principle, which counts against treating IVF as categorically excluded.

The proposition is a compound stem: the lexicon speaks directly to embryonic dignity and the male-female created procreative order, weighs in on embryo destruction and detached surrogacy, and is silent on the modern technology framing itself. The for and against readings cannot be reconciled into a single affirmation or denial without smuggling a category the words do not supply.

Stem audit

verdict-preloaded: yes

Neutralized form. What does the canonical lexicon say about the status of the human embryo and the ordering of procreation, and does it address assisted reproductive technology, embryo destruction or selection, and surrogacy conducted apart from marriage?

The original stem preloads a verdict by asserting the technology is open with concerns, which presupposes a permissibility framing the lexicon does not supply. The neutralized form strips the open ruling and asks what the lexical pattern actually addresses. The verdict was derived on the original stem and assessed as disputed because the personhood and creation-order threads bear directly on the embryo-loss and detached-surrogacy sub-clauses while the technology clause has no lexical footprint.
